Session and Query String Parameters

You can run reports dynamically based on Session and/or Query String Parameters. The syntax is the same as the Parameter Keys mentioned on page 8. You can define these parameters in any control that accepts SQL.

For Session values, use the syntax [SSN-YOURSESSIONVARIABLEHERE]. For example, if a module creates a session variable called UserID then you can use the following SQL:

```
SELECT    * FROM dbo.Users  Where  (UserID= '[SSN-UserID]')
```

If it was a querystring parameter, then you would use the following...

```
SELECT    * FROM dbo.Users  Where  (UserID= '[QRY-UserID]')
```

Executing Reports from Code

Use the following syntax to run a report from another module. Note that you will need the ID of the report you want to execute.

```
Dim objReport As New Onyak.PDFPro.PDFProView

objReport.ExecuteReport(ReportID)
```

Sharing Reports

Reports you create are yours to do with as you please. This includes the rights to sell the report source files. If you would like to add your report to the OnyakTech Report Repository on www.OnyakTech.com, email the report source file to Support@OnyakTech.com

Tip: The creator and modifier of the report is stored in the report source as text, not the user id of your profile in DNN. When creating the report, make sure you create the report with a name you want to be displayed on other sites when they are executed.
